## CMSI 386 Homework #4

## Zane Kansil & Edward Bramanti

## November 4, 2013

1. Abstract syntax tree for expression:

```
(a = 3) >= m >= ! & 4 * ~ 6 | | y %= 7 ~ 6 & p
```

- 2. Non-intuitive JS semicolon ambiguities
  - i someTitle1
  - ii someTitle2
  - iii someTitle3
  - iv someTitle4
- 3. Local variables init in static storage causes malfunctions
- 4. Statically scoped vs. Dynamically scoped
- 5. Shallow binding vs. Deep binding
- 6. C declatrations

```
double *a[n];
double (*b)[n];
double (*c[n])();
double (*d())[n];
```

7. C declarations re-done in Go

GoSol1 GoSol2

GoSol3

GoSol4

- 8. Translate:  $(-b + sqrt(4 \times a \times c)) / (2 \times a)$ 
  - (a) postfix notation
  - (b) prefix notation
  - (\*) urnary negation?
- 9. Interleave in C++ with C-style arrays
- 10. Interleave in C++ with C++ vectors
